

# Etude User Interface Engine

 **Etude-Virtuoso**  
*a beat ahead*

Complete &  
Independent  
Control of your  
Graphical User  
Interface

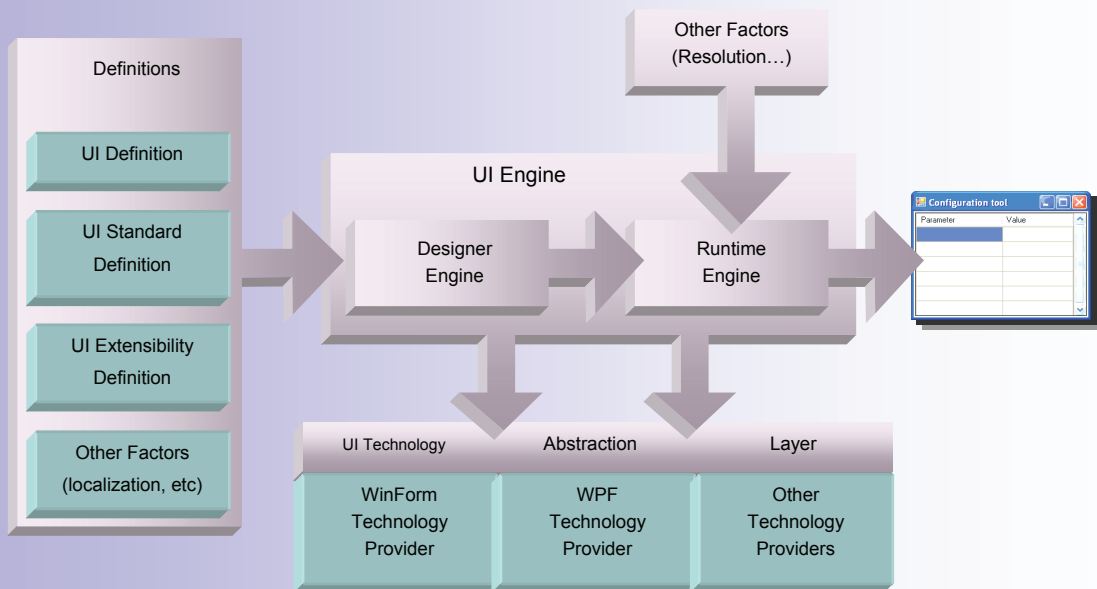

## Creating a New Paradigm

### Complete Independence & Total Control

### Etude's Graphical User Interface (GUI)

**Enhanced Productivity and Software Quality:** Etude's GUI Engine allows individual banks complete flexibility in the customization of their User Interface without compromising low-maintenance benefits of a packaged solution.

**What are its Advantages?** Through the UI Engine, clients can benefit from improved **extensibility** and **customization** capabilities, **homogeneity** across the application, platform **transparency** and **independence**, and an extremely high degree of **reutilization**.

**Data Versus Controls:** Etude's Graphical User Interface focuses on Data rather than Controls, so clients need only to define how their data is internally and externally related and grouped, including the order and actions that can be performed with the data. UI controls are then fully automated from that point forward.

**Standardization:** Both standardization and consistency are guaranteed as they are interpreted by automatic detection processes. All aspects of the User Interface are automatically adapted without any need to modify the exact User Interface Definitions, thereby retaining and easily updating your User Interface.

**Independence:** The UI is approach allows Etude's customers to ensure independence from any changes in channel access methods, technologies, communications protocols, screen resolutions, or any specifications and standards modifications between varied roles and functions within the financial institution.

## **About SlaterLabs**

SlaterLabs focuses on the design, development and deployment of mission critical application software to financial services organisations worldwide. The SlaterLabs team combines over 500 man years of core banking business and technical experience. The company is 100% dedicated to developing and delivering the first end-to-end core banking system, The Etude Programme, built entirely using the Microsoft Windows platform and Microsoft's .Net. For more information about SlaterLabs, visit [www.slaterlabs.com](http://www.slaterlabs.com).

## **About The Etude Programme from SlaterLabs**

The Etude Programme is a collaborative programme which aims to deliver a significantly different offering to the financial services sector which is currently faced with the build versus buy dilemma. The Etude Programme will let customers in-house staff lead the integration and implementation phases, with SlaterLabs development team effectively becoming the customer's own support system, providing consultancy, installation support and expertise to provide customers with the best of both the buy and build worlds. For further information about The Etude Programme from SlaterLabs, visit [www.slaterlabs.com/etude.html](http://www.slaterlabs.com/etude.html)
