Batch
No More

True 24x7 Processing

Complete On-line Processing Support

Etude's Unattended Planned Processes (UPP) permit the execution of business reconciliation processes without user intervention, and without requiring a stoppage to on-line operations. Etude's true 24x7 approach resolves the need to create long batch processes, allowing for traditional batch operations to be performed in an asynchronous manner, and within each on-line operation.

- **The Designer:** works with the customized Workflow console, where current processes can be maintained and new ones created. This process definition accelerates the response time for modifications and changes.
- **The Administrator Console:** grants access to all the configuration of processes and servers for supporting the operations.
- **The Management Server:** controls access to the model providing the coordination needed for deployment and execution.
- **The Database Server:** for a UPP, the Database Server holds the processing configuration, along with its status, until results of the execution are provided.
- **The Agent Servers:** will execute a UPP according to the configuration selected. Executions of actions usually involve the calling of operations in the Business Logic Layer.

About SlaterLabs

SlaterLabs focuses on the design, development and deployment of mission critical application software to financial services organisations worldwide. The SlaterLabs team combines over 500 man years of core banking business and technical experience. The company is 100% dedicated to developing and delivering the first end-to-end core banking system, The Etude Programme, built entirely using the Microsoft Windows platform and Microsoft's .Net. For more information about SlaterLabs, visit www.slaterlabs.com.

About The Etude Programme from SlaterLabs

The Etude Programme is a collaborative programme which aims to deliver a significantly different offering to the financial services sector which is currently faced with the build versus buy dilemma. The Etude Programme will let customers in-house staff lead the integration and implementation phases, with SlaterLabs development team effectively becoming the customer's own support system, providing consultancy, installation support and expertise to provide customers with the best of both the buy and build worlds. For further information about The Etude Programme from SlaterLabs, visit www.slaterlabs.com/etude.html
